### Orion Orion SkyQuest XT8 Classic Dobsonian Telescope

The classic XT8 combines powerful optics with the ultimate in mechanical simplicity and stability. It features a precision 8" (203mm) parabolic primary mirror, center-marked at the factory for precise collimation and mounted in a cast-aluminum support cell that provides maximum ventilation. The mirror pulls in 73% more light than a 6" – enough to tease out dust lanes in nebulas, resolve the cores of prominent globular clusters, and reveal subtle structure in elusive galaxies.

# Music Production at a Glance

With the computer as the hub of a music-production system, it's never been easier or more fun to compose music and create professional-sounding recordings; burn a CD; share music over the Internet; compose podcast soundtracks; or print scores and lead sheets. You'll find music-production systems to suit every budget and style; however, it's best to understand a few basic concepts and requirements to make the right choices.

Most recording software supports MIDI tracks alongside audio, so you can edit and hear both types of tracks. Audio is converted into a digital stream, processed inside your computer, and then converted back into sound waves on output. MIDI stands for Musical Instrument Digital Interface, and produces no sound on its own; it is a digital language that can trigger synthesizer performances, automate mixing chores, and more.

## Tools of the Trade

**Audio Interfaces** capture and digitize audio from microphone, mixer, and instrument inputs. Connected to computers with USB or Firewire, interfaces range from simple stereo input and output to sophisticated, multi-channel systems.

If you record live bands, you may have more musicians than inputs, so you'll probably need a *mixer* to blend and balance all of the signals.

You'll need at least a *microphone* or two. Some mics connect with a quarter-inch jack, and others connect with an XLR cable, and draw power from the mixer or interface. High-quality mics are relatively inexpensive.

Apart from audio, you will need a *MIDI interface* to route MIDI information to the recording software, where you can edit and play back the performance data to the synthesizer. These usually connect via USB, and are sometimes included in audio interfaces.

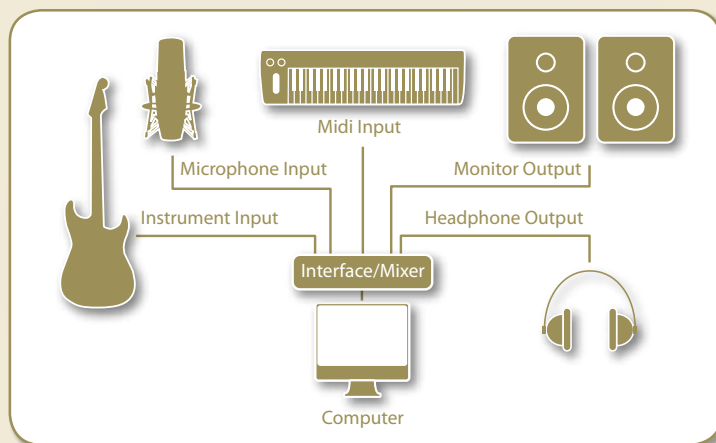

Keyboards are the most common *MIDI instruments*, but MIDI-equipped guitars, wind instruments, and drum pads are common. Some have built-in synthesizers, and others are strictly *MIDI controllers*, which produce no sound on their own, but generate MIDI notes and control messages.

*Software instruments* can be samplers, classic synthesizers, or imaginative hybrid instruments. They are the perfect companions to MIDI controllers, which let you tweak sounds while playing for dramatic, animated effects.

*Digital-audio workstation (DAW) software* is the core of computer-based music production. Here, you can record MIDI and audio tracks, cut and paste sections of music, and polish and mix your audio with reverb and other effects. You can overdub and record multiple tracks and takes as needed.

DAW programs often include music-notation capability, but to publish professional music copy, choose a dedicated music-notation program. Most *notation software* supports MIDI functionality, so you can enter your music note-by-note, or record in real time.

A modest investment will purchase a pair of *active monitors* so you can hear and mix your music. Active monitors provide their own amplification and power, eliminating a separate amplifier. Likewise, *headphones* are a necessity for private listening in the home studio.

**A Labtec® Elite 825B Headphones**

The Elite headphones deliver high-performance audio for home or portable use. These lightweight phones feature large, padded ear cups for a snug fit, along with outstanding audio properties for superb listening quality.

**\$13.95**  
#DM738589

**B Sennheiser Electronics RS 120 Wireless Stereo Headphones**

Notation 

MakeMusic®  
**Finale® 2010**  
 The World's Most Powerful Music Notation Software

- Enter your music into Finale using a MIDI keyboard, computer keyboard, mouse, mic, or scanner
- Band-in-a-Box® Auto-Harmonizing – automatically generates up to 6-voice harmonies for your melodies
- Exercise Wizard – instantly generates up to 50,000 practice pieces for your band, orchestra, or choir without entering a single note

The best tools are designed by the people who use them. Introducing Finale 2010 – the world standard in music notation software. Compose, arrange, notate, and print engraver-quality sheet music that plays back with world-class sounds. Finale continues to lead the way, helping you reach perfection faster.

The Set-up Wizard configures your score beautifully in seconds, and you have the ability to enter your music into Finale using a MIDI keyboard, computer keyboard, mouse, mic, or scanner. If you can imagine it, Finale can help you create it.

MSRP \$600.00 | You Save \$360 | **\$239.95**  
 Mac and Win #DM1024941

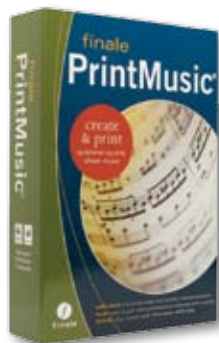

Sibelius®  
**Sibelius 6**  
 Perfect Scores Up to Twice as Fast – and More!

- Easy to learn and use – start writing your first piece within minutes
- The world's largest sheet music publishers use Sibelius
- Includes a 2GB collection of sounds selected from top-name libraries

Sibelius 6 is a giant leap forward in notation software – with amazing new features and improvements for composers, arrangers, copyists, educators, students, and musicians of all kinds.

Faster, neater, scores for students: Magnetic Layout positions almost every aspect of students' scores in just the right place – dynamics, lyrics, chord symbols, and more. Students can produce smarter scores more quickly for coursework and examinations – and Magnetic Layout helps teachers prepare scores for class and school performances in up to half the usual time. Teachers and students can now add virtual sticky notes to their scores – to pass on thoughts and suggestions efficiently, and in just the right places on a score.
